The Partner's Place

Dear Friends,

Happy New Year! Wow, 2006 is here and 2005 has come and gone. I hope your holiday season was everything you had hoped for and more.

What does 2006 hold in store for you and your family? I am sure that there will be a few birthdays to celebrate, vacations to enjoy, and maybe even a wedding to plan. Any home improvement projects on the calendar for the year? Now is the best time to tackle those projects, before the mercury soars and while those New Year's resolutions are still tugging at your shirt collar.

As you begin your project don't forget the technology and home entertainment aspects that you may want to incorporate. Many times it seems that these items are left out of the plan until it is almost too late. Low-voltage systems, whether they be entertainment, security, or comfort related items, are critical elements of any home remodel/renovation project. If you have hired or are thinking of hiring a general contractor to do the work make sure that he or she hasn't left out these crucial items. Careful planning and coordination up-front will save you from some large headaches in the future.

Again, Happy New Year. We look forward to continuing to work with you, your friends, and your clients during 2006. Talk to you soon

Sincerely,

Jason C. Evans
CEO

Caught In a Profile

This month: Nick Evans

What can be said about Nick that many of you haven't already experienced. Nick is the face of Components to many of you in the field and at the job site. While Jason and Doug are busy at the office or in sales appointments, Nick is usually making it all happen in the field.

Nick has been with Components since April 2005 and has been a great asset and addition to the company. He has over 3 years of experience in the industry and great leadership qualities. More than just a great installer and field technician, Nick is also great at interfacing and relating to our clients. He is not your typical construction site guy. Test him out sometime when you see him in the field, you won't be disappointed.

In his spare time Nick likes to ride his quad, snowboard, and spend time with friends and family. He also enjoys camping and other outdoor activities.

Technology News

Are you familiar with Vantage Automation & Lighting Controls? If not you are in for a real treat. Let me explain.

Can you imagine being able to create a lighting scene throughout your entire home with the press of just one button. How about being able to trigger lighting simply by stepping out of bed or walking into your closet. Let's take it a step further. As you are leaving the house you press one button that turns off all the lights, turns off all the audio/video equipment, arms the security system and sets back the thermostats a few degrees to conserve energy. Sound too good to be true? Well it is not.

All of the above scenarios and more are entirely possible with Vantage Automation & Lighting Controls. Best part is that there are products available for both new build and retrofit type situations.

So don't waste any time. Give us a call and we will be more than willing to visit with you in your home to discuss Vantage Automation & Lighting Controls. In the meantime feel free to visit their website at www.vantagecontrols.com where you can begin to make Vantage your first choice in automation and lighting controls.
