Creating Theater Retreats, Lighting Environments, Safety & Security One Home Or Business At A Time

The Partner's Place

The first quarter of 2006 has come and gone. How are you doing with those New Year's resolutions? If you have been able to stick it out this long you are on the right track. If you have tried but fallen short just remember that it is never too late to get back up and try again. If you remember, last quarter I talked with you a bit about home improvement projects. Have you made any progress with those goals? The dog days of summer are soon approaching so try to get all those outdoor improvements done to avoid melting in the Arizona summer heat.

Home security has been on my mind a lot lately. There have been reports of strange vehicles driving through the East Mesa neighborhoods looking into garages and taking inventory. Have you ever taken a quick tally of all the valuables in your home, many of which just can't be replaced? More importantly, how about the security of your loved ones? Do you travel a lot leaving your family at home or your house empty? Burglars and home intruders are becoming much more brazen and intelligent and it is our job to stay one step ahead. Many of the security measures that can be employed are very simple, things such as lock doors and windows, close garage doors, etc., however, we often fail to do them. Maybe you are one of those individuals that have a security system but don't use it or perhaps your system needs some repairs. I encourage you to do all that you can to secure your home and your belongings; it will save you many headaches and possibly heartbreaks in the future. As always, feel free to contact us at Components. We will gladly help you ensure the safety of your home and family. We will make it a priority. Until next quarter.

Sincerely,
Jason C. Evans
CEO

New Web Site

*Components is proud to announce the launch of our new web site. Please take a moment and look it over.

Technology News

What would we do without our cordless telephones at home, our cell phone on our hip, and wireless Internet so we can access our e-mail and check out our favorite websites? So, if wireless technology is so great then why even worry about wire when building a new home for example? Well, here are just a few reasons.

1. Wireless devices typically rely on some sort of battery for power. When the battery dies the novelty of the wireless devices wears off, quickly.
2. Wireless speeds and reliability will never match those of a physical wire. Category 5e has been the standard for many years for high speed data transmission. However, Category 6 and fiber optic cable are becoming more prevalent.
3. Security. Have you ever turned on your laptop in your home and noticed that you could access your neighbor's home network from your computer. If you can, then so can anyone else who just happens to be wandering through the neighborhood looking to hack into unsuspecting computers. Many individuals do not know how to secure their wireless networks. If you don't, pay to have it done, it could save you a lot of trouble in the end.

These are only a few reasons why having physical wire in your home or business is essential. As you build your home or plan for your new business location take some time to assess what your network and communications needs are and then have it wired accordingly.
